DANIEL UDE

Backend Engineer · Python, FastAPI, PostgreSQL · TDD and CI/CD with Claude Code

Lagos, Nigeria · Remote (UTC+1) · +234 703 663 0405 · danielude98@gmail.com
github.com/dannyude · linkedin.com/in/daniel-ude-2b750a152 · dannyude.github.io/portfolio

EXPERIENCE

Software Developer & Technical Facilitator (Contract) — SBTS Technology Ltd, Enugu Jun 2026 – Oct 2026
Consulting and software development company; ran its backend developer cohort

- Guided **40 developers** in Python, FastAPI and PostgreSQL through two projects; **34 of the 40 completed**.
- Taught 30–35 in-person sessions and 40+ live online sessions; 20+ code reviews; wrote the curriculum: github.com/dannyude/ICBM-Technical-Bootcamp-Cohort-Two
- Co-built the backend of a QR-code attendance system used by about 120 students; helped deploy it to a VPS.

Backend Engineer (Contract) — Tenece Services Ltd, Lagos Feb 2025 – Feb 2026
Software company; worked for Scuudu Labs, its innovation division, on the in-house game Nautical Fury

- Introduced CI/CD where none existed: tests, type checking and linting gated every push; passing builds deployed automatically, so failures were caught before release.
- Overhauled the crash-detection pipeline for **4,000+ installations**: a FastAPI endpoint queued 2,000–4,000 crash and error events a day to Celery workers.
- Set up Sentry for crash and error monitoring and moved the pipeline to test-first development: unit tests before each function, then system tests.

Freelance Backend Developer Dec 2021 – Mar 2025
15 clients, up to four at a time, including U.S.-based clients found through Upwork and Contra

- **Eye clinic (NDA):** contributed backend APIs to a team digitising records at the clinic's Enugu branch for 160,000+ patients; **retrieval fell from 35–60 to 5–10 minutes**.
- **Edtech LMS (NDA):** designed web and LMS APIs for about 150 students.

PROJECTS

Puente — fintech hackathon project · github.com/dannyude/pollar-app Sep 2026

- Built a Naira ↔ USDC escrow API test-first by directing AI coding subagents (Claude Code); **64 tests**; demo: pollar-app-alpha.vercel.app
- Wired the teammate's Next.js UI to the real API and made order creation idempotent with an Idempotency-Key.

PatStat — multi-tenant clinical status platform · github.com/dannyude/Pat-Stat Mar 2026 – May 2026

- Configured GitHub Actions CI with PostgreSQL 16 and Redis 7 service containers, running **248 tests**.
- Isolated each hospital's data through tenant-scoped routes with role-based access; delivered real-time patient updates through authenticated WebSocket connections, plus Firebase push via Celery.

Medication Reminder API · github.com/dannyude/medication-reminder-api Nov 2025 – Feb 2026

- Implemented refresh-token rotation with reuse detection (a replayed token revokes every session) and Redis rate limits on password resets per email and per IP.
- Delivered reminders by Firebase push with SMS fallback (Africa's Talking) and email; **73 tests**.

DocFlow — LLM document extraction API · github.com/dannyude/DockFlow_API Mar 2026

- Designed a multi-stage LLM document-processing pipeline: document segmentation, concurrent extraction and aggregation of structured results, run on Celery workers.
- A Redis circuit breaker pauses jobs during LLM provider outages and a sweeper re-queues them; a Redis Bloom filter rejects duplicate uploads.

WRITING

- **Book (in progress):** *Test-Driven Backend Development with Claude Code*, co-written with Claude; 10 parts, 28,000+ words. docs.google.com/document/d/1wU-Niq_QezELaupY8enCXfYAZcMkY56j
- **System design guide** (free, 71 pages, 30 diagrams): github.com/dannyude/system-design-fundamentals

SKILLS

Backend: Python · FastAPI · PostgreSQL · SQLAlchemy · Redis · Celery · WebSockets
Quality and tooling: Test-driven development (TDD) · pytest · GitHub Actions (CI/CD) · Claude Code · Sentry · Git

EDUCATION

Diploma in Backend Engineering — AltSchool Africa 2024 – 2025

LL.B., Second Class (Upper Division) — Enugu State University of Science and Technology 2016 – 2021
